<b>Python Module Index</b>	<b>3</b>
<b>Index</b>	<b>5</b>

This is my boilerplate project.

```
boilerplate.add.add(first_number, second_number)
```

This function adds two numbers together.

$$a + b = s$$

**Parameters**

- **first\_number** – The first number
- **second\_number** – The second number

**Returns** The sum.

**Return type** float

**b**

`boilerplate.add, 1`

## A

`add()` (*in module `boilerplate.add`*), 1

## B

`boilerplate.add(module)`, 1
